TRANSLITERATION OF CYRILLIC

The system for transliteration (romanization) of Cyrillic used in this index is given below in the column headed "MR (new)". It is the system that has been used in Mathematical Reviews since the beginning of 1983 and it is largely in agreement with other transliteration systems in use in the U.S.A., such as those of the American National Standards Institute (ANSI), the U.S. Library of Congress (LC), and the Institute for Scientific Information (ISI). The principal feature of these systems is that they are intended to be as phonetic as possible for speakers of English.

The table below lists all Cyrillic letters occurring in Slavic languages, and the transliteration schemes used by:

Mathematical Reviews since 1983 = MR (new),
MR before 1983 and Zentralblatt für Mathematik (Zbl) before 1980 = old (MR, Zbl),
Zbl since 1980 = Zbl (new),
American National Standards Institute = ANSI,
U.S. Library of Congress = LC,
Institute for Scientific Information = ISI.

The transliteration of the British Standards Institute (BSI) agrees with that of ISI, except for the letters ё and й ↦ ĭ.

In the schemes of some of these enterprises, a few Cyrillic letters receive more than one transliteration, depending on the language in which the letter occurs. Non-Russian Cyrillic letters and transliterations different from the ones for Russian are identified by superscript numbers:

1 Ukrainian
2 Belorussian
3 Serbian
4 Macedonian
5 Bulgarian.

In order to achieve complete reversibility of the transliteration scheme, centered dots are used as a separating or bracketing device in the following cases: тс↦t·s, тш↦t·sh, шч↦sh·ch, ыу↦y·u, ыа↦y·a, дј↦d·j, лј↦l·j, нј↦n·j, for separation, and џ↦ dzh· for bracketing.

Alphabetization (in indexes, etc.) follows the "stripped" version (i.e., without diacritical marks) of the transliteration; the symbol ″ (double prime) representing ъ and the single prime representing ь are treated as diacritical marks and ignored. The capital version of the Bulgarian ″ is distinguished by an underbar: ″̲.

MathSciNet has an especially powerful system of internal links between reviews and provides direct links to the papers themselves if they are available on line. The reviews are classified by subject and are searchable in multiple ways. Thus, it provides an unparalleled method of browsing the literature for serious content (along with accurate bibliographic data).

—Journal of Electronic Publishing, University of Michigan Press

MathSciNet—available by subscription on the Web—provides searching of 60 years of *Mathematical Reviews* (MR) and *Current Mathematical Publications* (CMP). Enhancements include:

Expanded linking to original articles in AMS and other available online journals.
There are now links to over 100,000 original journal articles, including:

- **New Springer LINK**—42 journals in mathematics and related areas published by Springer-Verlag and Birkhauser.
- **JSTOR mathematics journals**—back volume issues of *American Journal of Mathematics, American Mathematical Monthly, Annals of Mathematics, Journal of Symbolic Logic, SIAM Journal of Applied Mathematics, SIAM Journal on Numerical Analysis, SIAM Review,* and the back issues of *Journal of the AMS, Mathematics of Computation, Proceedings of the AMS,* and *Transactions of the AMS.*
- **ScienceDirect**®—including over 70 journals from Elsevier Science and other publishers in key subject areas for mathematics and applied math.
- **Academic Press**—including 26 mathematics journals from IDEAL®.
- **Oxford University Press**—8 mathematics journals.
- **Society for Industrial and Applied Mathematics**—10 journals in applied mathematics fields.
- **New York Journal of Mathematics**
- **Pacific Journal of Mathematics**
- **Electronic Journal of Combinatorics**
- **American Mathematical Society**—8 journals.

To Original Article links to available original articles.

When links to original articles in online journals have not yet been established, MathSciNet links to that journal's home page. From the journal's home page, various avenues of access to the original article may be available to subscribers of the journal.

To Journal New links continue to be added.

Three browsing tools point to current data in MathSciNet: The Browse Current Books, Browse Current Journals and Browse by Mathematics Subject Classification (MSC).
